Chipman/BP Solar Plant – Chipman/United Van Lines brought us in to give them a solution for asset recovery/recycling at their Fairfield, CA warehouse. The building was a former BP Solar panel manufacturing plant with a large quantity of industrial electrical and HVAC equipment that was no longer being used by “Chipman”. We facilitated removal and relocation of many items to our Benicia, CA warehouse. These items consisted of; large valves, boilers, pumps, chillers, cooling towers, a chemical scrubber, bus-duct, transformers, motor control centers, and related electrical distribution equipment. The above approximately 60 tons of equipment has been mostly recycled for reuse at other projects.
