

IAR makes 100% commitment to go "Green & Walk the Talk"

*Industrial Asset Recyclers works hard to keep it's "Carbon Footprint" small and stay "Green" by using natural light from its warehouse clear story windows, and thereby keeping the lights turned off, saving about 15,000 KWH's of power per year. In addition, IAR uses recycled packing materials, many used cardboard boxes, and recycled pallets in it's shipping department. All non -functioning equipment is broken down into its' basic components so the base materials may be recycled. The company's owner even try's to stay "Green" at home by: putting all organic waste in a composting bin, sharing a "Prius" for much long route driving, keeping the thermostat turned down low, using re-useable canvas bags for shopping, and separating recyclables.*
